rmarkdown 0.2.50 Updated: 8/14

## 1. Workflow

R Markdown is a format for writing reproducible, dynamic reports with R. Use it to embed R code and results into slideshows, pdfs, html documents, Word files and more. To make a report:

- i. Open** - Open a file that uses the .Rmd extension.
- ii. Write** - Write content with the easy to use R Markdown syntax
- iii. Embed** - Embed R code that creates output to include in the report
- iv. Render** - Replace R code with its output and transform the report into a slideshow, pdf, html or ms Word file.

## 2. Open File

Start by saving a text file with the extension .Rmd, or open an RStudio Rmd template

- In the menu bar, click **File ► New File ► R Markdown...**
- A window will open. Select the class of output you would like to make with your .Rmd file
- Select the specific type of output to make with the radio buttons (you can change this later)
- Click OK

## 3. Markdown

Next, write your report in plain text. Use markdown syntax to describe how to format text in the final report.

### syntax

Plain text  
End a line with two spaces to start a new paragraph.  
*italics* and `_italics_`  
**bold** and `__bold__`  
superscript<sup>2</sup> and `^2^`  
~~strikethrough~~ and `~strikethrough~`  
[\[link\]\(www.rstudio.com\)](http://www.rstudio.com)

# Header 1  
## Header 2  
### Header 3  
#### Header 4  
##### Header 5  
##### Header 6

endash: --  
emdash: ---  
ellipsis: ...  
inline equation:  $A = \pi * r^2$   
image: 

horizontal rule (or slide break):  
\*\*\*

> block quote

\* unordered list  
\* item 2  
+ sub-item 1  
+ sub-item 2

1. ordered list  
2. item 2  
+ sub-item 1  
+ sub-item 2

Table Header	Second Header
Table Cell	Cell 2
Cell 3	Cell 4

### becomes

Plain text  
End a line with two spaces to start a new paragraph.  
*italics* and *italics*  
**bold** and **bold**  
superscript<sup>2</sup>  
~~strikethrough~~

# Header 1

## Header 2

### Header 3

#### Header 4

##### Header 5

###### Header 6

endash: –  
emdash: —  
ellipsis: ...  
inline equation:  $A = \pi * r^2$   
image: 

horizontal rule (or slide break):  
-----

> block quote

- unordered list
- item 2
  - sub-item 1
  - sub-item 2

1. ordered list  
2. item 2

- sub-item 1
- sub-item 2

Table Header	Second Header
Table Cell	Cell 2
Cell 3	Cell 4

## 4. Choose Output

Write a YAML header that explains what type of document to build from your R Markdown file.

### YAML

A YAML header is a set of key: value pairs at the start of your file. Begin and end the header with a line of three dashes (---)

The RStudio template writes the YAML header for you

The output value determines which type of file R will build from your .Rmd file (in Step 6)

**output: html\_document** ..... html file (web page)

**output: pdf\_document** ..... pdf document

**output: word\_document** ..... Microsoft Word .docx

**output: beamer\_presentation** ..... beamer slideshow (pdf)

**output: ioslides\_presentation** ..... ioslides slideshow (html)

**5. Embed Code** Use knitr syntax to embed R code into your report. R will run the code and include the results when you render your report.

### inline code

Surround code with back ticks and `r`. R replaces inline code with its results.

### code chunks

Start a chunk with ````{r}`. End a chunk with `````.

### display options

Use knitr options to style the output of a chunk. Place options in brackets above the chunk.

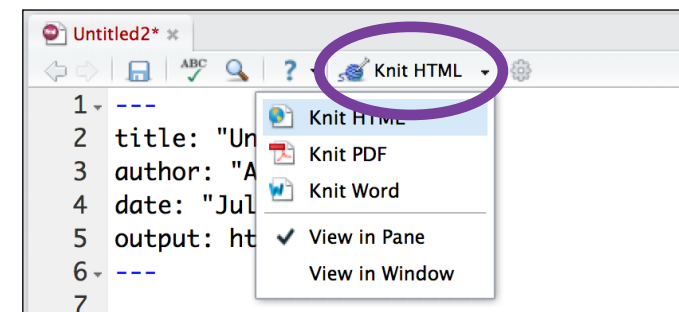

option	default	effect
<code>eval</code>	TRUE	Whether to evaluate the code and include its results
<code>echo</code>	TRUE	Whether to display code along with its results
<code>warning</code>	TRUE	Whether to display warnings
<code>error</code>	FALSE	Whether to display errors
<code>message</code>	TRUE	Whether to display messages
<code>tidy</code>	FALSE	Whether to reformat code in a tidy way when displaying it
<code>results</code>	"markup"	"markup", "asis", "hold", or "hide"
<code>cache</code>	FALSE	Whether to cache results for future renders
<code>comment</code>	"###"	Comment character to preface results with
<code>fig.width</code>	7	Width in inches for plots created in chunk
<code>fig.height</code>	7	Height in inches for plots created in chunk

For more details visit [yihui.name/knitr/](http://yihui.name/knitr/)

**6. Render** Use your .Rmd file as a blueprint to build a finished report.

Render your report in one of two ways

1. Run `rmarkdown::render("<file path>")`
2. Click the **knit HTML** button at the top of the RStudio scripts pane

When you render, R will

- execute each embedded code chunk and insert the results into your report
- build a new version of your report in the output file type
- open a preview of the output file in the viewer pane
- save the output file in your working directory

**7. Interactive Docs** Turn your report into an interactive Shiny document in 3 steps

\* Note: your report will be a Shiny app, which means you must choose an html output format, like `html_document` (for an interactive report) or `ioslides_presentation` (for an interactive slideshow).

**8. Publish** Share your report where users can visit it online

### Rpubs.com

Share non-interactive documents on RStudio's free R Markdown publishing site [www.rpubs.com](http://www.rpubs.com)

### ShinyApps.io

Host an interactive document on RStudio's server. Free and paid options [www.shinyapps.io](http://www.shinyapps.io)

Click the "Publish" button in the RStudio preview window to publish to [rpubs.com](http://rpubs.com) with one click.
